

The spiderweb

- It is possible to connect an Arduino mini pro to a 28-pin socket with quit short connecting wires as shown in below picture
- Connections are shown on next page

Connecting Serial and CAN modules

- On the next page is shown how to connect CAN and Serial modules
- CAN module require an extra 5V regulator either supplied from the 12volt car battery or an 240volt to 5volt power supply connected in parallel with the charger
